Employment

March 2017 – May 2018 – Associate Software Engineer

June 2018 – Present – Software Engineer

WellSky, Shreveport LA

- Full stack working with Google Polymer, Ruby on Rails, and PostgreSQL on a very large agile team
- Tasked with gathering specifications, designing, implementing, and unit testing major features and architecture for the new flagship product.
- Regularly involved in core architecture meetings
- Responsible for large-scale front end refactoring resulting in large performance increase and development time decrease
- Work done(solo) includes continuous integration, multi-tenant architecture, AWS file system, conditional logic builder, the site menu, and many important features.
- Awarded engineering award in early 2018; Promoted ahead of yearly evaluation for good performance

Projects

Personal Site

- I've written a personal site at <https://dylanlafont.com>. Written with React and Express.js hosted on an AWS EC2 instance. CI implemented through AWS' CodePipeline. The source is on my GitHub at <https://github.com/djlafo>.
